INTRODUCTION

Agriculture is the most significant sector of our economy. Mostly the low-income class of the rural area is involved in this profession. Unfortunately, many people have switched over to other professions as they have found agriculture the least paying profession. The trend is contrary to the developed countries where farmers get considerable dividend from farming largely owing to the adoption of scientific methods and backup with authentic data which makes the basis for their constant research work.

Crop Reporting Services is an important arm of Agriculture that provides basic data on agriculture sector. Like other developing countries which have established their Agriculture Information Systems for providing support to their planners, producers and distributors, CRS Pakistan too has empowered, with the task of collecting data in agriculture sector. If we intend to have an accurate picture of this sector, we must focus on strengthening of Crop Reporting Services to collect and display authentic and reliable data.

We are very grateful to the Secretary Agriculture Khyber Pakhtunkhwa, who always stressed upon the importance of crop statistics on one hand and on the other hand, he has played a frontal role in strengthening Crop Reporting Services.

Comments / Suggestions, if any, for improvement in the publication would be welcomed.

December, 2021.

CHAPTER-1

(General Data 2020-21)

BASIC CONCEPTS AND DEFINITIONS USED IN CROPS ESTIMATION

VILLAGE:

It is a Revenue estate, which has defined boundaries on the ground and separate revenue records, cadastral map is maintained for it.

KHASRA:

A piece of land having defined boundaries and has been assigned with a specific number in the cadastral map is known as Khasra Number. The record maintain in the Register is called Khasra Register. The crop area statistics collected by the patwari are recorded in a register known as Khasra Register.

GIRDAWARI:

It refers to the crop inspection register maintained by patwari.

QANUNGO:

The work of patwari is supervised by an immediate officer called Qanungo.

CADASTRAL SURVEY:

Complete survey of all Khasra Numbers pertaining to a particular village with the help of Cadastral Map is called Cadastral Survey.

JINSWAR STATEMENT:

After completion of entries for each (survey number of the) village, an abstract of area sown under different crops is prepared, which is called Jinswar Statement. The results of cadastral survey consolidated on tehsil and district basis during each vegetative season (Kharif + Rabi) is called Jinswar Statement.

KHASRA GIRDWARI:

It is a document, in which the patwari record the name of owner, name of cultivator, land/Khasra number, area, kind of land, cultivated and non-cultivated area, source of irrigation, name of crop and its conditions, revenue and rate of revenue, minimally twice in a year.

AGRICULTURAL YEAR:

Agricultural year starts from the month of July (Kharif Season) and ends next year in the month of June (Rabi Season).

MIXED CROP:

A number of crops grown on the same land are called Mixed Crop.

CROPPING PATTERN:

System of growing different crops in a particular season is called Cropping Pattern.

SAMPLING DESIGN:

A sample design is the framework, or road map that serves as the basis for the selection of a survey sample. It effects many aspects of a survey.

SAMPLING FRAME:

In sampling procedure, it is essential to have a list or a map which helps in identifying each sampling unit by a number, such a list or map is called sampling frame.

SAMPLING UNIT:

The smallest units which can be identified and are used for drawing samples and on which observations can be recorded.

POPULATION:

The population is collection of all sampling units which possess certain characteristics as per the objectives of the survey.

MARKETABLE GRAIN:

The weight of the harvested grain which can be sold in the market after drying is called Marketable Grain.

GINNING:

It is a process of getting cleaned cotton by removing the seeds, dust or any other foreign particles.

CROP CUTTING EXPERIMENTS:

It is a technique of selecting random plot of a given size in the field of a specified crop and harvesting its produce by following specified methodology.

OPERATIONAL HOLDING:

An operational holding is defined as a techno-economic unit allotted wholly or partly for agricultural production and operated by one person along with the assistance of others, without regard to title, size or location.

HOUSEHOLD:

A household is a group of persons normally living together and taking food from a common kitchen.

FARM:

It is the aggregate area of land operated by member (s) of one household alone or with the assistance of members (s) of other household (s) without regard to location, size or title and normally used for agricultural production. Farm wholly uncultivated during the census year also included in this category.

INDIVIDUAL FARM:

It means a farm operated by one or more persons of the same household.

JOINT FARM:

It means a farm jointly operated by persons belonging to two or more different households.

CULTIVATED AREA:

It is that farm area which was sown at least once during the year under report or for the year before. It is the sum of area "Net Sown" and "Current Fallow".

NET SOWN:

It is that cultivated farm area which is actually sown during the year under report regardless of the number of crops raised and includes area under Fruits trees for the same year.

CURRENT FELLOW:

It is that cultivated farm area which is neither cropped neither during the census year nor in the year before that.

NOT AVAILABLE FOR CULTIVATION:

It is that uncultivated area of the farm which is under home-stead, farm roads and other concern purposes. Therefore, it is not available for cultivation.

FOREST AREA:

It is that uncultivated farm area which is under Forest.

CULTURABLE AREA: -

It is the sum of cultivated and culturable wasteland.

CROPPED AREA: -

It means the aggregate area of crops raised in a farm during the census year including the area under fruits trees.

IRRIGATED AREA:

It includes that cultivated area, which is actually irrigated at-least once during the year under report by artificial means.

BARANI AREA:

It is that cultivated area which entirely dependent upon rain's water for its cultivation. It includes the area flooded or that area which gets moisture from rivers through soil percolation.

INTENSITY OF LAND USE:

Represents the cultivated area measured in term of total cultivable area multiplied by, 100
i.e.

$$\text{Intensity of land use} = \frac{\text{Cultivated Area} \times 100}{\text{Total Cultivable Area}}$$

It indicates the extent to which the cultivable land was used for production.

INTENSITY OF CROPS: -

Represents the total cropped area in terms of total cultivated area multiplied by 100 i.e.

$$\text{Intensity of Cropping} = \frac{\text{Total Cropped Area} \times 100}{\text{Total Cultivated Area}}$$

It indicates the extent to which the cultivated area was used for cropping.

CLASSIFICATION OF CROPS

Group	Kharif	Rabi
Food / Cereal	Maize, Rice, Bajra & Jowar	Wheat & Barley
Oilseed	Groundnut, Sesamum, Soybean, Sunflower & Caster-seed	Rape & Mustard, Sunflower, Saf Flower & Linseed
Pulses	Mung, Mash, Arhar & O. k. Pulses	Gram, Masoor, Matter, O. R. Pulses
Condiments	Chilies, Turmeric,	Garlic, Coriander, Ginger, Onion,
Cash/ Commercial	Cotton Sugarcane, Sun hemp, Guara & Jute	Tobacco & Sugar beet
Horticulture	Vegetables, fruits & Fodders, Potato (Summer + Autumn)	Vegetables, fruits & Fodders, Potato (Spring)

1. Total Cultivated Area has decreased because of decrease in net sown area and increase in current fallow.
2. Total Uncultivated Area has increased because of increase in Area Not available for Cultivation.
3. Land Use Statistics of Tehsil Havelian is reported for the first time, therefore the total reported Area of District Abbottabad has been increased from 178401 to 190190 Hectares.

CHAPTER-2

SPATIAL / REMOTE SENSING BASED, DISTRICT WISE
KHARIF CROP MASK
OF
KHYBER PAKHTUNKHWA
2020-21

SPATIAL / REMOTE SENSING BASED, DISTRICT WISE KHARIF CROP MASK (2020-21)

Information on agricultural land use is one of the most important parameters required for policy making and decision support regarding availability of reliable crops statistics. Kharif crop mask is developed for different districts of Khyber Pakhtunkhwa, including Abbottabad, Bajaur, Bannu, Battagram, Buner, Charsadda, D.I. Khan, Haripur, Kohat, Lower Dir, Upper Dir, Malakand, Mansehra, Mardan, Nowshera, Orakzai, Peshawar, Shangla, Swabi, Swat, Tor Ghar, Khyber, Kurram, Karak and Hangu, using satellite imagery and GIS technology.

KHYBER PAKHTUNKHWA POINT MAP

District Abbottabad Kharif Crop Mask

Legend

-  **Rice**

CHAPTER-3

(District-wise Crop Data for 2020-21)

KHARIF CEREALS

Kharif Cereals such as Rice and Maize are members of the grass family and they are particularly important to humans because of their role as staple food crops in many areas of the world.

Major Kharif Cereals

Maize

Rice

Bajra

Jowar

MAIZE (مکئی)

Maize also known as corn, is a cereal grain first domesticated by indigenous peoples in southern Mexico about 10,000 years ago. Maize is generally used for animal feed. It is widely processed into various types of products such as cornmeal, grits, starch, flour, tortillas, snacks, and breakfast cereals. Maize flour is used to make chapatis or flat breads which are eaten mainly in a few Northern states of Pakistan. Maize is a staple cereal very popular due to its high nutritional significance enriched with abundant amount of macronutrients like starch, fibre, protein and fat along with micronutrients like vitamin B complex. Cultivation of Maize is focused in the regions of Mansehra, Swat, Buner, Haripur Swabi etc of Khyber Pakhtunkhwa.

A. Area (Hect:)

2019-20	2020-21	%age change over last year
452623	460653	+ 1.77

Reasons for change:

- Favorable weather condition during sowing time.
- Lucrative market prices for the crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
881618	891021	+1.07

Reasons for change:

- Corresponding increase in area.
- Use of high yielding and disease tolerant varieties.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
26.35	16.89	20.97

MAIZE, 2020-21

RICE (چاول)

Rice is the seed of the grass species *Oryza sativa* or less commonly *Oryza glaberrima*. The name wild rice is usually used for species of the genera *Zizania* and *Porteresia*. In Pakistan rice is an important cash crop of the country. It accounts 2.7% of the value added in agriculture and 0.6% of GDP. It provides 21% of global human per capita energy and 15% of per capita protein. Three varieties of rice varieties are being cultivated in Pakistan i.e. Basmati types – Indica (aromatic), medium long grain - Indica (IRRI type) and bold grain - japonica (cold tolerant varieties in zone – I) in pkaistan. In Khyber Pakhtunkhwa Major rice producing districts are D.I. Khan, Swat, Malakand, Dir. Lower, Dir upper and Malakand etc.

A. Area (Hect:)

2019-20	2020-21	%age change over last year
64891	64916	0.04

Reasons for change:

- Good market price.
- Favorable weather condition for the crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
158491	158534	(+)0.03

Reasons for change:

- Corresponding increase in area.
- Development of high yielding and disease free tolerant varieties.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
26.47	0.00	26.47

Millet/Bajra (باجرا)

Millets (Bajra) are a group of highly variable small-seeded grasses, widely grown around the world as cereal crops or grains for fodder and human food, commonly consumed in different varieties and colours. It is a short duration plant and excellent for dry areas because of its potentiality to high tillering, drought and heat tolerance, high photosynthetic efficiency, versatile adaptation to soil types, high protein content and good stock production. Millet is rich in dietary fiber, both soluble and insoluble. It contains important nutrients such as proteins, and minerals. It is an excellent source of feed as dry hay for cattle in winter. Millet is equally successful in un-irrigated/(Barani) and irrigated tracts and is an important grain crop in Khyber Pakhtunkhwa. This crop is grown throughout Khyber Pakhtunkhwa with D.I. Khan, Karak, Kohat Hangu and some parts of District Peshawar due to less consumption of water.

A. Area (Hect:)

2019-20	2020-21	%age change over last year
3037	4223	(+ 39.05

Reasons for change:

- Attractive market returns last year motivated the growers to bring more area under the crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
1851	3619	(+ 95.52

Reasons for change:

- Corresponding increase in area.
- Favorable weather condition for the crop.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
26.47	0.00	26.47

JOWAR/SORGHUM (جوار)

Sorghum known as Jowar is an ancient cereal grain belonging to the grass family “Poaceae”. It is small, round, and usually white or yellow, though some varieties are red, brown, black, or purple. There are many species of sorghum. It can tolerate heat and drought condition so can be cultivated in both Un-irrigated/rain fed and irrigated areas. It's rich in vitamins and minerals like B vitamins, magnesium, potassium, phosphorus, iron, and zinc. Its different varieties have potential to increase milk production in milch animals and also used as food for poultry and fodder for livestock utilization. Among all fodders sorghum is cultivated on more areas in Khyber Pakhtunkhwa. Major production of Sorghum comes from D. I. Khan, Mardan, Swabi, Haripur, Karak, and Lakki Marwat.

A. Area (Ha):

2019-20	2020-21	%age change over last year
5523	9218	(+ 66.90

Reasons for change:

- Favorable weather condition during sowing time.
- Attractive market prices.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
3512	6128	(+ 74.49

Reasons for change:

- Favorable weather Conditions.
- Availability of inputs on subsidized rate (fertilizers, seeds etc).

C. Yield Per Acre in Mounds:

KHARIF PULSES

Pulses are the most important source of protein and energy in Pakistan. The carbohydrates provided by pulses are released slowly as compared to cereals and so have a high value for maintaining optimal blood sugar levels and restoring energy over a long period of time after the meals. Because of the population growth, demand for pulses is increasing day by day. There is a need to develop varieties with higher yield potential that respond to improved management practices so as to meet the increasing demand of pulses.

Major Kharif Pulses of KPK

- ❖ *MUNG*
- ❖ *MASH*
- ❖ *ARHAR*
- ❖ *OTHER KHARIF PULSES*

Green gram also known as mung is one of the main pulse crop of Pakistan. It is a rich source of Protein along with fiber, iron and other essential nutrients. They are added to several dishes for taste and to gain Health benefits. It can be cultivated as Kharif as well as summer crop. Mung Production increase when grown on well drained loamy to sandy-loam soils. For summer season crop, three to five time irrigations are required depending upon soil type and climatic condition Major Mung producing districts in Khyber Pakhtunkhwa are Chitral D. I. Khan, Buner, Dir Lower Hangu, Dir Upper and Merged Districts.

A. Area (Hect:):

2019-20	2020-21	%age change over last year
6891	6398	(-)7.15

Reason for change:

- Flood in river Swat followed by heavy rains in the month of August and September 2020. Resultantly, area adjacent to river Swat was badly eroded.
- Conversion of land to other crops such as Rice, Seasmum, etc.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
4612	4163	(-) 9.74

Reason for change:

- showing a decrease of 9.74% due to corresponding decrease in the area.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
7.52	5.46	7.05

Mash/Black gram split is bean reclassified from the Phaseolus to the Vigna genus, that originated in Asia and has been in cultivation from ancient times. It is considered as one of the highly priced pulses of Pakistan, grown in Kharif season, it is a very nutritious, containing plant protein, fiber, low-glycemic carbohydrates, vitamins, minerals and antioxidants. The Mash are creamy white from inside and black brown colored from outside. it can be grown on variety of soil ranging from sandy soils to heavy cotton soils. The most ideal soil is a well drained loam with pH of 6.5 to 7.8. Black gram cannot be grown on alkaline and saline soils. Land is prepared like any other kharif season pulse crop. in Khyber Pakhtunkhwa Major Mash producing districts include Chitral, Dir Upper, Dir Lower, Swat and Merged Districts.

A. Area (Ha):

2019-20	2020-21	%age change over last year
927	965	+ 4.10

Reason for change:

- The increase in area is due to its good market rate

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
890	907	+ 1.91

Reason for change:

- Increase in production is due to Corresponding increase in Area.
- Timely application of fertilizer & Pesticides.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
10.70	9.33	10.19

ARHAR (Pigeon Pea) (ارار)

The pigeon pea is a perennial legume from the family Fabaceae. It is consumed on a large scale in South Asia and is an excellent source of protein and iron, they also provide Vitamin A and B-6, calcium, magnesium, potassium and more minerals. Today, pigeon pea is widely cultivated in all tropical and semitropical regions. Pigeon pea thrives in well-drained soils and a hot environment. The plant will not grow in waterlogged areas. Arhar is considered as an enormous food grain and an essential diet of the people of Pakistan and that's the reason that it is grown approximately in every part of the country. In Khyber Pakhtunkhwa Mash producing districts are Swabi, Nowshera, Mardan, Peshawar and Charsadda.

A. Area (Hect:):

2019-20	2020-21	%age change over last year
472	435	(-) 7.84

Reason for change:

- The decrease in area is due to conversion of land to other competitive crops like Rice, and Sesamum

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
287	270	(-) 5.92

Reason for change:

- showing a decrease of 5.92% due to corresponding decrease in its area.

C. Yield Per Acre in Mounds:

OTHER KHARIF PULSES (دیگر خسررف دالین)

Pulses are the most important source of vegetable protein in Pakistan. They are cultivated on 5% of the total cropped area. Their use ranges from baby food to delicacies of the rich and the poor. Because of the population growth, demand for pulses is increasing day by day. Pulses are mostly cultivated under rainfed conditions and do not require intensive irrigation facility. Mash, mungbean, Kedny bean nad Arhar are the major Kharif pulse crops, respectively in Khyber Pakhtunkhwa (KP) with major areas lying in districts of Karak, Lakki Marwat, Tank and D.I.Khan. In these areas, the crops are grown on marginal lands with low fertility and negligible external inputs.

A. Area (Ha):

2019-20	2020-21	%age change over last year
563	546	(-) 3.02

Reason for change:

- The decrease in area is due to convert land to other crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
257	235	(-) 8.56

Reason for change:

- The decrease in production is due to corresponding decrease in area.

KHARIF CONDIMENTS

Condiment crops produce edible materials used in small amount to impart flavor to food. These include culinary herbs, spices, and plants from which flavorful chemicals can be extracted. Some condiments are used during cooking to add flavor or texture Kharif Condiments of Khyber Pakhtunkhwa are Chilies, Turmeric etc.

Major Kharif Condiments of KPK

(Chilies, Turmeric)

CHILIES (سرچ)

Green Chilies are a popular condiment in Pakistan. this little wonder is packed with a host of benefits. chilies are rich in dietary fiber, rich in vitamin B6, vitamin A, iron, copper, potassium and a small amount of protein and carbohydrates, which is important for a healthy digestive system It is zero calorie, making it great for weight loss. Chili condiment adds spice and flavor to recipes. chilies really appreciate good soil and drainage.it grow best in temperature between 70 and 85° F, it is almos grown in all districts of Khyber Pakhtunkhwa.

A. Area (Hect:):

2019-20	2020-21	%age change over last year
348	379	(+)8.91

Reason for change:

- Good market prices of the crop farmer grow more chilies.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
403	442	(+)9.68

Reason for change:

- Corresponding increase in area of chilies crop.
- Timely application of fertilizer & pesticides.
- Development of high yielding and disease tolerant varieties.

C. Yield Per Acre in Mounds:

TURMERIC (ہندی)

Turmeric, a plant of the ginger family, is native to Southeast Asia and is grown commercially in that region. Historically, it was used in medical systems. Turmeric is rich in vitamin C, vitamin B6, and other antioxidants that reduce the risk of serious health conditions like heart disease and diabetes etc. Turmeric is kharif crop which may be sown on sandy or clayey loam and well drained soils. Most of its production comes from District Bannu and Haripur in Khyber Pakhtunkhwa

A. Area (Hect):

2019-20	2020-21	%age change over last year
282	198	(-)29.79

Reasons for change:

- Conversion of land to other competitive crops such as Rice, sesamum, chilies etc.
- Unfavorable weather condition especially in District Bannu.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
2744	1926	(-)30.57

Reasons for change:

- The decrease in production is due to corresponding decrease in area

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
105.44	0.00	105.44

KHARIF VEGETABLES (خريف سبزیات)

Vegetables are parts of plants that are consumed by humans or other animals as food. The original meaning is still commonly used and is applied to plants collectively refer to all edible plant matter, Vegetables play an important role in human nutrition. Most are low in fat and calories but are bulky and filling. They supply dietary fiber and are important source, of essential vitamins, minerals, and trace elements. The nutritional content of vegetables varies considerably as some contain useful amounts of protein though generally they contain little fat and varying proportions of vitamins such as vitamin A, vitamin K, and vitamin B6, provitamins ,dietary minerals and carbohydrates. Kharif vegetables are sown in summer and harvested in late summer or early autumn. The important Kharif vegetables of Khyber Pakhtunkhwa province are lady fingers, tinda, brinjals, bitter gourd, bottle gourd, pumpkin, kharif tomatoes and cucumber etc.

A. Area (Ha):

2019-20	2020-21	%age change over last year
23188	23135	(-) 0.23

Reason for change:

- The decrease in area can be attributed to unfavorable weather condition for vegetables.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
212367	208450	(-)1.84

Reason for change:

- is due to corresponding decrease in area and adverse effect of climate.

C. Yield Per Acre in Mounds:

KHARIF FRUITS (کھریف پھل)

Kharif fruits refer to the planting, cultivation and harvesting of any domesticated plant sown in the rainy (monsoon) season in the Asian subcontinent. Such vegetation is planted for autumn harvest and may also be known as the summer season or monsoon crop in Pakistan. The key to maintaining good health is to balance macronutrients and it can be achieved by adding fruits in daily diet. Most fruit is naturally low in fat, sodium, and calories and a source of many essential nutrients such as potassium, vitamins A and C, folate, and dietary fibers, Fruits grown in Pakistan during Kharif season are Apple, Apricot, Banana, Chikoo, Jaman, Dates, Guava, Lemon, Litchi, Mango, Pears, Pomegranate, etc. While Fruits grown in Khyber Pakhtunkhwa during Kharif season are Water Mellon, Musk Mellon, Apricot, Banana, Apple, Dates, Pomegranate, Walnuts, Almonds etc.

A. Area (Ha.):

2019-20	2020-21	%age change over last year
36053	33703	(-) 6.52

Reason for change:

- The decrease in area is due to heavy rains and hail storms.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
326617	281789	(-)13.72

Reasons for change:

- Heavy rains and hail storms during maturity of fruit production.

KHARIF FODDERS

Fodder crops are crops that are cultivated primarily for animal feed. Fodder crops may be classified as either temporary or permanent crops. The former is cultivated and harvested like any other crop. Temporary crops that are grown intensively with multiple cuttings per year. All types are fed to animals, either as green feed, as hay, crops harvested dry or dried after harvesting. These fodders are maize, sorghum, millet, etc. Green fodder is an economic source of nutrients for the dairy animals. It is highly palatable and digestible. Micro-organisms present in green fodder help in improving digestibility of crop residues under mixed feeding system. It also helps in maintaining good health and improving breeding efficiency of animals. In Khyber Pakhtunkhwa major Fodders grown during Kharif Season are Sorghum, Millet etc.

A. Area (Ha):

2019-20	2020-21	%age change over last year
43896	43433	(-) 1.5

Reason for change:

- The decrease in area is due to conversion of area to other corps.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
669150	664943	(-) 0.6

Reason for change:

- The decrease in production is due to Correspondence decrease in area.

Kharif Oil Seed

Oilseed crops are the second most important determinant of the agricultural economy, next only to cereals within the segment of field crops. Oilseed crops are primarily grown for the purpose of obtaining vegetable oils from them. Oil content in them varies from 20% in soybeans to 40% in sunflowers and canola (rapeseed). Oilseeds are energy dense foods, due to their high oil content. They are a source of fiber, vitamins (vitamin E, niacin, and foliate), minerals (phosphorus, iron, and magnesium), monounsaturated (e.g., ground nuts) and polyunsaturated (e.g., sunflower) fatty acids.

Major Oil Seed Crops of KPK

Ground Nut

Soyabean

Seasmum

GROUND NUT (مونگ پھلی)

Peanut, also known as the groundnut, it is the most important cash crop grown mainly for its edible seeds. It is widely grown in the tropics and subtropics, being important to both small and large commercial producers. It is a good source of edible oil as it contains about 50% of oil of good quality. Groundnut oil is one of the best cooking oils due to its high smoking point and is desirable for use in ghee, margarine, shortening and salad oil. The meal contains 25 % protein and considered best meal for human consumption and livestock feed. Groundnuts are also a great blend of healthy fats, protein and fiber that curbs your appetite, lowers the risk of heart disease and regulates blood glucose levels. Kohat division, Mardan division, Peshawar division and Merged Districts are the major producing areas of Khyber Pkhatunkhwa.

A. Area (Ha):

2019-20	2020-21	%age change over last year

SOYABEAN (سویا بین)

Soybean, (Glycine max) also called soya bean, is annual legume of the pea family (Fabaceae). The soybean is economically the most important bean in the world, providing vegetable protein for millions of people and ingredients for hundreds of chemical productable oil as it contains about 50% oil of good quality. Soybeans and soy foods may reduce the risk of a range of health problems, including cardiovascular disease, stroke, coronary heart disease (CHD), some cancers as well as improving bone health. in Khyber Pakhtunwkh major soyabean producing district is Swat. It is also cultivated in some part District Mardan

A. Area (Hect:):

2019-20	2020-21	%age change over last year
106	181	(+) 70.75

Reasons for change:

- high demand and lucrative price for edible oil.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
152	201	(+) 32.24

Reasons for change:

- The increase in production is due to the corresponding increase in area.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
15.68	10.41	12.04

Sesame seed is one of the oldest oilseed crops known, domesticated well over 3000 years ago. Sesame varieties are adapted to many soil types. The high-yielding crops thrive best on well-drained, fertile soils of medium texture and neutral PH. However, these have a low tolerance for soils with high salt and water-logged conditions. Dried whole sesame seeds provide calories and are composed of water, carbohydrates including dietary fiber, fat, and protein. Whole sesame seeds are rich or more of the Daily Value in several B vitamins and dietary minerals, especially iron, magnesium, calcium, phosphorus, and zinc. seasmum oil meal, is rich in protein (35-50%) and is used as feed for poultry and live stocks. Potential areas for sesame cultivation in Khyber Pakhtunkhwa are D.I. Khan, Haripur, Kohat and some part of Mardan and Peshawar Division.

A. Area (Ha:)

2019-20	2020-21	%age change over last year
146	240	(+) 64.4

Reasons for change:

- Distribution of seed by Agriculture Extension Department under PSDP project.
- Attractive market prices.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
88	137	(+) 55.7

Reasons for change:

- Corresponding increase in area and favorable weather condition.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total

KHARIF COMMERCIAL CROPS

Commercial crops or cash crops agricultural crops which are grown to sell for profit. They are typically purchased by parties separate from farm. The term “commercial” is used to differentiate marketed crops from subsistence crops, which are those fed by producer's own livestock or grown as food for the producer's family. in Khyber Pakhtunkhwa the Kharif commercial crops Area Sugar-Cane, Cotton, Jute and Guara etc

KHARIF COMMERCIAL CROPS OF KPK

Sugarcane, Cotton & Guara

SUGARCANE (گن)

Sugarcane is a species of tall, perennial grass that is used for sugar production. The plants are 2–6 m tall with stout, jointed, fibrous stalks that are rich in sucrose, which accumulates in the stalk internodes. Sugarcane is an important industrial and cash crop in Pakistan and in many countries of the world. It is grown in tropical and sub-tropical regions of Pakistan in a range of climates from hot dry environment near sea level to cool and moist environment at higher elevations. Sugarcane is rich in antioxidants so it helps fight infections and boost the immunity. It's rich in iron, magnesium, calcium and other electrolytes. Major sugar cane producing Districts in

Khyber Pakhtunkhwa are D.I.Khan, Charsadda, Mardan, Peshawar and Malakand.

A. Area (Ha:)

2019-20	2020-21	%age change over last year
109359	107438	(-) 1.76

Reasons for change:

- The decreasing trend is due to conversion of land to other crops like Rice, Maiz etc.
- Low market price.
- Closer of Bannu Sugar mill.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
5753957	5627545	(-) 2.20

Reasons for change:

- The decrease is due to Corresponding decrease in area.

Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
567.85	460.90	567.79

COTTON (کپاس)

Cotton plant is a warm-season woody perennial shrub, which is grown as an annual field crop. However, cotton plants is grown in various environments. Cotton is the most important cash crop in Pakistan cotton products account for 55 percent of all foreign exchange earnings of the country. In addition to textile products like socks and t-shirts, cotton is also used in fishnets, coffee filters, tents, book binding, archival paper and also used for medical purposes. D.I.Khan is only cotton producing districts in Khyber PakhtunKhwa.

A. Area (Hect:):

2019-20	2020-21	%age change over last year
213	108	(-) 49.30

Reasons for change:

- This decrease can be attributed to conversion of land to other crops.

B. Production (Bales):

2019-20	2020-21	%age change over last year
647	331	(-) 48.84

Reasons for change:

- Decrease in production is due to corresponding decrease in area.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
33.22	0.00	33.22

GUARA گوار

Guara , also called guaran, is extracted from the seed of the leguminous shrub “Cyamopsis Tetragonolobus”, which is grown in the arid and semi-arid regions of Pakistan. It is a cash crop, because It has various commercial applications mainly in oil industries, textile, well drilling, printing, cosmetics, mining, paper, petroleum, pharmaceutical and natural gas. Guar gum is a fiber from the seed of the guar plant. Guar gum is used as a laxative. It is also used for treating diarrhea, irritable bowel syndrome (IBS), obesity, and diabetes; for reducing cholesterol. In Khyber Pakhtnkwha major Guara Producing Districts are Bannu, D.I. Khan, Lakki Marwat, and Karak.

A. Area (Ha):

2019-20	2020-21	%age change over last year

RABI CEREALS

Cereals are the foundation of human civilization. It is any grass cultivated for its edible components of grain. In their natural, unprocessed, whole grain form, cereals are a rich source of vitamins, minerals, carbohydrates, fats, oils, and protein. While each individual species has its own peculiarities, the cultivation of all cereal crops is similar. Most are annual plants; consequently one planting yields one harvest. Wheat, rye, triticale, oats, barley, and spelt are the Rabi season cereals.

MAJOR RABI CEREALS CROPS OF KPK

Wheat

Barley

Wheat is one of the oldest and most important of the cereal crops. Of the thousands of varieties known, the most important is common wheat (*Triticum aestivum*), spring wheat is grown as a Rabi crop in Pakistan. wheat is considered a highly responsive crop to starter fertilizers, particularly phosphorus and nitrogen. Most wheat is typically milled into flour and is then used to make a wide range of foods including breads, muffins, noodles, pasta, biscuits, cakes, etc for human consumption. wheat flour may be a good source of iron, thiamine, niacin, calcium, and vitamin B6. Wheat has been importat part of human diet and it is grown in all most all parts of Khyber Pakhtunkhwa.

A. Area (Ha:)

2019-20	2020-21	%age change over last year
727276	761784	(+) 4.74

Reasons for change:

- Favorable weather condition at the time of sowing.
- Conversion of land from barley, Rape Seed & Mustard, etc to wheat crop due to high market price for wheat.
- Distribution of quality seeds.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
1130358	1361585	(+)20.46

Reasons for change:

- Corresponding increase in area.
- Application of fertilizers, insecticides and pesticides on time.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
24.71	14.16	19.38

BARLEY (ج)

Barley, a member of the grass family, is a major cereal grain grown in temperate climates globally. It was one of the first cultivated grains. Barley is a cereal grain. People often eat the grain as food. Some people also use the grain to make medicine. Barley is most commonly used for heart disease and high cholesterol. In manufacturing, barley is used as a food grain, natural sweetener, and used in breads, soups, stews, and health products, though it is primarily grown as animal fodder. Major barley producing districts in Khyber Pakhtunkhwa are Lakki Marwat, Karak, D.I Khan, Tank and Haripur etc.

A. Area (Ha):

2019-20	2020-21	%age change over last year
20986	20861	(-) 0.60

Reason for change:

- Lower market price for barley.
- Conversion of land to wheat crop due to its lucrative price.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
18569	18635	(+) 0.36

Reason for change:

- Timely rainfall.
- Availability of inputs on subsidized rate (fertilizers, seeds etc.).
- Use of high yielding and disease tolerant varieties.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
13.28	8.13	9.68

RABI PULSES

Rabi pulses are grown on 28 million hectares globally. They are concentrated on temperate and sub-tropical climate. Rabi Crops are harvested in the spring in Pakistan. The crops are grown either with rainwater that has percolated into the ground or using irrigation. They are high in protein, fibre, and various vitamins, provide amino acids, and are hearty crops. Researchers have reported that regular consumption of pulses may reduce the risk of heart disease, diabetes and certain types of cancer. Pulses are the most important source of vegetable protein in Pakistan. They are cultivated on 5% of the total cropped area. Their use ranges from baby food to delicacies of the rich and the poor. Because of the population growth, demand for pulses is increasing day by day.

MAJOR RABI PULSES OF KPK

(Gram, Masoor, Matter & Other Rabi Pulses)

Gram known as Chana is a major Rabi pulse crop in Pakistan. It is grown in areas after rain and floods. Being a leguminous crop, it is well suited with dry tracks. chana is a good source of minerals like magnesium and potassium, which help to prevent high blood pressure and reduce bad cholesterol levels, there by boosting heart health. Gram is one of the important economic pulses of Pakistan. it is commonly grown in the rainfed area of Karak, D.I. Khan, Lakki Marwt, Tank, Kohat.

A. Area (Ha):

2019-20	2020-21	%age change over last year
33699	23245	(-) 31.02

Reasons for change (Decrease):

- Shifting of land to other crops due to better earning of other crops.
- Unfavorable weather condition.
- Higher price of gram seed.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
15052	11586	(-) 23.03

Reasons for change:

- Corresponding decrease in area.
- Reduction in yield per Acre due to various diseases.

C. Yield Per Acre in Mounds:

MASOOR (مسور)

Masoor dal is a Rabi pulses and an important part of the diet in many parts of the world and Pakistan. It is basically split lentil without skin and is red in colour. It does not need soaking prior to cooking as it is a soft dal and cooks quickly. It is rich in vitamins A, C, and E, manganese, zinc, antioxidants, and other bioactive compounds, which can help to boost immunity. It is also good for the heart as it helps lower cholesterol and blood pressure levels. In Khyber Pakhtunkhwa it is cultivated in District Lakki Marwat, Tank, Chitral and some part of Merged Districts

A. Area (Ha):

MATTAR (مطر)

Pea is most commonly the small spherical seed or the seed-pod of the pod fruit. Each pod contains several peas, which can be green or yellow. Pea pods are botanically fruit. In Pakistan it is Rabi season crop. Peas take between 8-12 weeks from sowing until harvesting. Peas are a good source of vitamins C and E, zinc, and other antioxidants that strengthen our immune system. Other nutrients, such as vitamins A and B and coumestrol, help reduce inflammation and lower risk of chronic conditions, including diabetes, heart disease. As it has good market value and taste, it is grown in all divisions of Khyber Pakhtunkhwa.

A. Area (Hect:):

2019-20	2020-21	%age change over last year
1269	1207	(-) 4.93

Reasons for change:

- Unfavorable weather condition.
- Conversion of area to wheat crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
895	899	(+) 0.39

Reasons for change:

- Improved varieties were sown.
- Better crop management.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
9.54	5.76	8.07

OTHER RABI PULSES (دیگر ریح دالیں)

There are other Rabi season pulses such as cowpea and pigeonpea etc. Some pulses are harvested in both Kharif and Rabi Season. Pulses are mostly cultivated under rain fed conditions and do not require intensive irrigation facility and this is the reason why pulses are grown in areas left after satisfying the demand for cereals/cash crops which make it an important group of crop in all over the world, for yielding large financial. Apart from this, pulses possess several other qualities such as they are rich in protein, improve soil fertility its physical structure and fit inter-cropping system.

A. Area (Ha):

RABI SPICES/CONDIMENTS

Spices and condiments are known as one of the most remarkable ingredients of the many styles of cuisine in the world. Generally, spices are food ingredients mainly used to season a food dish during its preparation. In contrast, condiments are mainly used at the dining table to enhance the dish and add extra flavor, texture, and nutrients to meals. world spice market is continuously growing and Pakistan contributes in spice production to the world.

MAJOR RABI SPICES/CONDIMENTS

OF KPK

Garlic, Coriander & Onion

GARLIC (لہسن / تقوم)

Garlic is a plant in the Allium (onion) family. It is closely related to onions, shallots and leeks. Each segment of a garlic bulb is called a clove. There are about 10–20 cloves in a single bulb, give or take. Raw garlic contains Manganese, Vitamins, Selenium, Fiber, Decent amounts of calcium, copper, potassium, phosphorus, iron. Garlic can benefit the heart, brain, and other organs. It reduces risk factors, such as blood pressure, cholesterol, and heavy metal toxicity. Major garlic producing districts in KhyberPakhtunkhwa are Swabi, Nowshera, Charsadda, Kohat, Peshawar Mardan and Swat.

A. Area (Ha):

2019-20	2020-21	%age change over last year

CORIANDER (دھنیا)

Coriander is an annual herb in the family Apiaceae. It is also known as dhania. its leaves are called cilantro. Coriander is commonly used to flavor international dishes, like soups, salsas, curries and masalas. Coriander leaves are often used whole, whereas the seeds are used dried or ground. Coriander has many health and economic benefits, it may protect heart by lowering blood pressure and LDL (bad) cholesterol and increasing HDL (good) cholesterol. A spice-rich diet appears to be associated with a lower risk of heart disease. In Khyber Pakhtunkhwa major producing Districts of coriander are Dir, Hangu and merged Districts.

ONION (پیاز)

Onion also known as the bulb onion or common onion, is a vegetable that is the most widely cultivated species of the genus *Allium*. Its close relatives include garlic, scallion, leek, chive, and Chinese onion. Raw onions are very low in calories, with only 40 calories per 3.5 ounces (100 grams). By fresh weight, they are 89% water, 9% carbs, and 1.7% fiber, with tiny amounts of protein and fat. Onions has health benefits as it contains antioxidants and compounds that fight inflammation, decrease triglycerides and reduce cholesterol levels, all of which may lower the risk of heart disease. In Khyber Pakhtunkhwa major producing onion Districts are Swat, Malakand, Charsdda, Sawabi, Mardan, and Merged districts.

A. Area (Ha):

2019-20	2020-21	%age change over last year
11898	11842	(-) 0.47

Reason for change:

- Unfavorable weather condition.
- Low market prices.
- Conversion of land into other crops.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
209112	219279	(+) 4.86

Reason for change:

- Timely application of fertilizers and pesticides.
- Use of high yielding varieties and better management of crop.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
6.45	0.00	6.45

Vegetables, the edible product of a herbaceous plant are plant with soft stem, as distinguished from the edible nuts and fruits produced by plants with woody stems such as shrubs and trees. Vegetables can be grouped according to the edible part of each plant: leaves (lettuce), stalks (celery), roots (carrot), tubers (potato), bulbs (onion), and flowers (broccoli). In addition, fruits such as tomato and seeds such as pea are commonly considered vegetables. Vegetables are an important part of a healthy diet. A diet rich in vegetables can lower blood pressure, reduce the risk of heart disease and stroke, prevent many types of cancer, lower risk of eye and digestive problems, and have a positive effect upon blood sugar. Rabi Season vegetables like Cauliflower, Spinach, Turnip, Beans, Cabbage, Peas, Radish, etc. are grown on larger scale. In different parts of Khyber Pakhtunkhwa.

A. Area (Ha:)

2019-20	2020-21	%age change over last year
14337	15433	7.64

Reasons for change:

- favorable weather condition.
- Conversion of land from other crops to vegetables.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
160677	176650	(+) 9.94

Reasons for change:

- Correspondence increase in area.

Fruits are good source of vitamins and minerals, recognized for their role in preventing vitamin C and vitamin A deficiency. People who incorporate fruits and vegetables as part of a healthy eating pattern have a reduced risk of many chronic diseases. It is an important part of a healthy eating pattern and the source of many vital nutrients, including potassium, folate (folic acid), and antioxidants including polyphenols. Fruit such as blueberries, cranberries, strawberries and citrus also contain phytochemicals that are being studied for their added health benefits. Fruits grown in Pakistan during Rabi season are Guava, Loquat, Banana, Grapes, Mulberry, Dates, Almond, Lemon, Kino, Sour Lime & Sour Orange etc. The Fruits grown in Khyber Pakhtunkhwa during Rabi season include Citrus, Loquat, Guava, Banana, Mulberry etc.

A. Area (Ha):

2019-20	2020-21	%age change over last year
8452	7705	(-)8.84

Reasons for change:

- Conversion of area into commercial uses.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
66775	60578	(-)9.28

Reasons for change:

- Corresponding decrease in area.
- Hailstorm damages.
- Pest attack.

Fodder is used by dairy farmers where spend most of their money on feeding their animals for growth. Approximately 60% of all expenses on dairy farming are spent on the provision of appropriate feed according to the requirements of animals. wintertime fodders have a higher protein content to help tolerate a cold climate, Fodder is used specifically as healthy diet to feed domesticated livestock such as cattle, rabbit, sheep goats etc, Major fodders grown in Khyber Pakhtunkhwa during Rabi Season are Barley, shaftal, berseem etc.

A. Area (Ha):

2019-20	2020-21	%age change over last year
57863	64619	(+) 11.68

Reasons for change:

- Favorable weather condition at the time of sowing.
- Increase in demand for fodder for cattle.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
1333572	1331170	(-) 0.18

Reasons for change:

- Lack of better crop management.
- Unfavorable weather condition.
- Less use of pesticides due to their high prices.

RABI OIL SEED

Oil seeds play a significant role in the day-to-day life of the people. Oil seeds are very important component of tropical agriculture for they provide easily available and highly nutritious food to human beings and animals. In Pakistan, mainly two types of oilseed crops are grown during Rabi season, etc. Traditional (Rape & Mustard) and Non-Traditional (Sunflower, Safflower)

MAJOR RABI OIL SEED OF KPK

RAPE SEED & MUSTARD, SUN FLOWER , SAFFLOWER

RAPE SEED & MUSTARD (سرسوں)

Rape seed (*Brassica napus* subsp. *napus*), also known as rape, or oilseed rape. Rape Mustard prefers full sunlight, moist to dry conditions, and a neutral to alkaline soil containing loam, clay-loam, or gravelly material. The size of individual plants varies greatly according to moisture conditions and soil fertility. its seeds, yield canola, or rapeseed, oil. Canola oil is variously used in cooking, also as an ingredient in soap and margarine, and as a lamp fuel (colza oil). Rapeseed oil is pure oil, it contains no protein or carbohydrates. However, it is a good source of healthy fats and fat-soluble vitamins. Major rape seed & mustered producing district in Khyber Pakhtunkhwa are D.I.Khan, Swabi, Swat, Malakand Mardan etc.

A. Area (Ha:)

2019-20	2020-21	%age change over last year
13023	13878	(+) 6.57

Reasons for change:

- Better market prices.
- Timely supply of water and good moisture condition.
- Favorable weather condition at the time of sowing.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
6406	7011	(+)9.44

Reasons for change:

- Corresponding increase in area.
- Use of fertilizer in districts Mardan, Haripur & D.I. Khan.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
6.83	4.90	5.48

SUNFLOWER

(سورج مکھی)

Sunflowers are usually tall annual or perennial plants and can grow to a height of 300 cm (120 inches) or more. These flowers are unique in that they have the ability to provide energy in the form of nourishment and vibrancy. The sunflower seed is the seed of the sunflower. There are three types of commonly used sunflower seeds: linoleic, high oleic, and sunflower oil seeds. Each variety has its own unique levels of monounsaturated, saturated, and polyunsaturated fats. Sunflower seeds are rich in protein and healthy fats, as well as antioxidants that can lower the risk of developing serious conditions. It is also a good source of oil for cooking.

A. Area (Ha):

2019-20	2020-21	%age change over last year
441	376	(-)14.74

Reason for change:

- Conversion of land to other profitable crops.
- Unfavorable weather condition for the crop.

B. Production (Tonnes):

2019-20	2020-21	%age change over last year
636	634	(-)0.31

Reasons for change:

- Corresponding decrease in an area.
- Poor management of the crop.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
10.31	0.00	10.31

SAF-Flower (زعفران)

Safflower, (*Carthamus tinctorius*) is a highly branched, herbaceous, thistle-like annual plant in the sunflower family Asteraceae. It is commercially cultivated for vegetable oil extracted from the seeds. Safflower oil contains healthful fats called unsaturated fatty acids. When consumed in moderation, it may offer health benefits. In Khyber Pakhtunkhwa saf-flower is grown in district Sawabi.

- **Area (Hect:):**

POTATO CROPS

Pakistan is self-sufficient in potatoes for household consumption and relies for more than 99% on locally produced potatoes. In Pakistan Potatoes are grown in autumn, spring and summer season. Red and white skin potatoes varieties are cultivated in the country. Potatoes having a high nutritive value and these contributes more protein and iron than other vegetables in the average diet and are also useful sources of thiamine, niacin and several other nutrients including fiber.

(Potato Summer+ Autumn & Potato Spring)

RABI (SPRING) POTATO (ربیع آلو)

Potato is a starchy tuber of the plant *Solanum tuberosum* and is a root vegetable native to the Americas. The plant is perennial in the nightshade family Solanaceae. The planting of Spring potatoes starts in January to February and harvested in the month of April and May. Potatoes are rich in vitamins, minerals and antioxidants, which make them a healthy. Studies have linked potatoes and their nutrients to a variety of impressive health benefits, including improved blood sugar control, reduced risk of heart disease and higher immunity. In Khyber Pakhtunkhwa Major potato producing districts are Abbottabad, Mansehra, Haripur, Sawabi, Mardan, Charsadda, Peshawar and Merged Districts.

132.04	113.94	126.90

KHARIF (SUMMER & AUTUM) POTATO

(خريف آلو)

Potato varieties are classified according to the number of days they require to come to harvest. Early potatoes are the best choice for southern regions where summer become very warm or hot. Plant potatoes not mature later than 12 weeks before the first expected autumn frost. Planting of summer potatoes starts in March and May and it is harvested in August to October, where as the sowing of Autumn potatoes start in September and October and its cultivation starts in January and February. Summer and Autum potates are grown in district abbotabad, Mansehra, Mardan, Chitral, Dir Upper, Shangla, Swat, Peshawar, Charsadda, Nowshehra and Merged Districts of Khyber Pakhtunkhwa.

A. Area (Ha):

- Lack of proper management of the crop.

C. Yield Per Acre in Mounds:

Irrigated	Un-irrigated	Total
170.69	93.63	161.75

Sugar beet, (*Beta vulgaris*), is form of beet of the amaranth family (*Amaranthaceae*), cultivated as a source of sugar. Sugar beet juice contains high levels of sucrose and is second only to sugarcane as the major source of the world's sugar. It is known as the *Altissima* cultivar group of the common beet. The sugar beet has long been grown as a summer crop in relatively cool parts of the temperate zones of Pakistan. Sugar beets can be consumed raw when young and are grated and sliced into green salads. However, the overconsumption of beets can lead to some health problems. Risks of overconsumption include: Increased risk of kidney stones. In Khyber Pakhtunkhwa Sugar Beet is sown during rabi season the D.I. Khan & Malakand district.

A. Area (Ha):
